
Environmental Management Systems (EMS)
Implementation Guide for the
Shipbuilding and Ship Repair Industry

July 2003

Acknowledgments

This Environmental Management Systems Implementation Guide for the Shipbuilding and Ship Repair Industry was developed by the Sector Strategies Division of the U.S. Environmental Protection Agency (EPA) Office of Policy, Economics and Innovation in partnership with the American Shipbuilding Association and the Shipbuilders Council of America.

This EMS Guide is a combination of examples and tools from EPA-sponsored EMS source documents (see Appendix F for an annotated list of sources) and actual industry examples developed during the EPA Sector Strategies Shipbuilding and Ship Repair

EMS pilot. Important contributions were made by the following individuals and organizations: ICF Consulting, Austin Environmental Consulting, T. Michael Chee of National Steel and Shipbuilding Company, Vince Dickinson of Bath Iron Works, Donna Elks of Electric Boat Corporation, E. Kay Freeman and Steve Lacoste of Northrop Grumman Ship Systems, Shaun Halvax of Southwest Marine, Jack Holmes and George Sladeczek of FirstWave Marine, and Jackie Morris of Bender Shipbuilding and Ship Repair Company.

Table of Contents

Introduction

Introduction and User's Guide	iv
Index of Exhibits and Examples	vi

Plan

Module 1: Laying the Groundwork for EMS	1-1
Module 2: Structure and Responsibility	2-1
Module 3: Environmental Policy	3-1
Module 4: Legal and Other Requirements	4-1
Module 5: Environmental Aspects	5-1
Module 6: Objectives and Targets	6-1
Module 7: Environmental Management Programs	7-1

Do

Module 8: Training, Awareness, and Competence	8-1
Module 9: Communication	9-1
Module 10: EMS Documentation	10-1
Module 11: Document Control	11-1
Module 12: Operational Control	12-1
Module 13: Emergency Preparedness and Response	13-1

Check and Act

Module 14: Monitoring and Measurement	14-1
Module 15: Nonconformance and Corrective and Preventive Action	15-1
Module 16: Records	16-1
Module 17: EMS Audits	17-1
Module 18: Management Review	18-1

Appendices

- A. Glossary
- B. Integration of Environmental Management Systems and Quality Management Systems
- C. Health and Safety Integration Questionnaire
- D. Environmental Aspect/Impact Ranking
- E. Additional Tools
- F. EPA-sponsored EMS Source Documents

Introduction and User's Guide

This Environmental Management Systems Implementation Guide for the Shipbuilding and Ship Repair Industry (EMS Guide) is a combination of examples and tools from EPA-sponsored EMS source documents (see Appendix F for an annotated list of sources) and actual industry examples developed during the EPA Sector Strategies Shipbuilding and Ship Repair EMS pilot.

The EMS Guide is meant to assist shipbuilding and ship repair facilities in weaving environmental decision-making into the fabric of the way they do business. The purpose is not only to achieve better compliance assurance, but also to improve environmental performance in areas such as resource conservation, energy efficiency, water-use efficiency, land use, and mitigation of impacts associated with noise, odor, and dust. As a result of comprehensive planning, rigorous implementation, regular checking, and effective corrective action, EMSs are helping shipyards to consistently meet their environmental goals and commitments. Shipyards that have an effective EMS are becoming more efficient, more competitive, and better able to meet other crucial challenges, such as increased security.

Many shipbuilding and ship repair facilities have components of an EMS already in place. This EMS Guide encourages the user to identify and build on existing components whenever possible. It describes an EMS that is based on the elements of the ISO 14001 standard and also incorporates EPA's National Environmental Performance Track emphasis on sustained compliance, pollution prevention, and information sharing with the community. Though there are other types of EMSs that one could adopt, and EPA does not specifically endorse any individual EMS standard, the ISO 14001 EMS is the most widely recognized and one that many companies are beginning to require their suppliers to adopt. Therefore, moving in the direction of implementation and maintenance of an EMS based on the ISO 14001 standard may be a wise business decision. The choice to build an EMS that, if desired, could be certified in the future, may make sense for you based on your business goals and

needs. Facilities implementing an EMS that meets the requirements of the ISO 14001 standard can either self-declare conformance or seek third-party registration.

To facilitate your implementation process, this EMS Guide contains 18 modules—an initial laying-the-groundwork module followed by 17 modules, each of which corresponds to an EMS element. The modules are grouped into three activities that correspond generally to the plan-do-check-act model that most management systems follow. Each module contains:

- Background information that explains the EMS element and recommends what should be established and maintained for this element to be suitable and effective;
- A set of review questions and worksheets that are meant to make EMS adoption easier and more thorough;
- Sample procedures as required by the ISO 14001 standard, and accompanying forms that will be used to document conformance with the procedures. The procedures are meant to serve as templates that can be customized by your shipyard to define roles, responsibilities, activities, and record keeping for that EMS element; and
- Examples of how a shipyard might document and record information associated with the requirements of its EMS. Usually these are examples of how to complete the recommended forms.

The EMS Guide recommends that facilities establish, at a minimum, the several documented procedures required by the ISO 14001 standard. An index of sample procedures and forms is provided as *Exhibit 11-3: Master Document List for EMS Manual*. When you create an EMS for your facility, you will want to adopt a labeling system for identifying procedures, forms, and work instructions. As you can see in the index of procedures and forms, this EMS Guide uses a hypothetical labeling system wherein environmental procedures (EP) that apply facility-wide are labeled EP-001 to EP-017. The first form associated with EP-003 is labeled EF-003.01 and the second form associated with EP-003 is labeled EF-003.02, and so forth. Environmental

work instructions (EWI) that apply to a subset of the whole facility are labeled EWI-001 to EWI-006. The first form associated with EWI-001 is labeled EWI-001.01 and the second form associated with EWI-001 is labeled EWI-001.02, and so forth.

In this EMS Guide are sample procedures and other examples of how a shipyard might document and record its EMS. Revising these examples should be much easier than starting with a blank page. However, when using these examples, it is crucial to review the requirements of your facility in accor-

dance with company policies and the most recent federal, state, and local requirements.

Definitions of EMS terms used in this EMS Guide are provided in the text, as well as in the glossary in Appendix A.

Index of Exhibits and Examples

Module 1: Laying the Groundwork for EMS

- Exhibit 1-1: EMS Program Costs
- Exhibit 1-2: EMS Program Savings
- Exhibit 1-3: “Plan, Do, Check, Act” Model
- Exhibit 1-4: EMS Model
- Exhibit 1-5: Gap Analysis Tool/Self-Assessment Checklist
- Example 1-1: Schedule for EMS Implementation

Module 2: Structure and Responsibility

- Exhibit 2-1: EMS Expertise and Roles Across Facility Functions
- Exhibit 2-2: Element Review Questions
- Exhibit 2-3: EMS Responsibilities Descriptions
- Exhibit 2-4: EMS Responsibilities Form
- Example 2-1: Responsibility Matrix
- Example 2-2: Organization Chart

Module 3: Environmental Policy

- Exhibit 3-1: Element Review Questions
- Exhibit 3-2: Environmental Policy Template
- Example 3-1: Sample Environmental Policies

Module 4: Legal and Other Requirements

- Exhibit 4-1: Element Review Questions
- Exhibit 4-2: Procedure for Identification of Legal and Other Requirements (EP-001)
- Exhibit 4-3: Information Resources for Legal Requirements
- Exhibit 4-4: Procedure for Obtaining Agency Approval (EP-002)
- Example 4-1: Commonly Applicable Federal Environmental Laws in the U.S.
- Example 4-2: Sample List of Relevant Legal and Other Requirements for Shipbuilding and Ship Repair Operations

Module 5: Environmental Aspects

- Exhibit 5-1: Cause and Effect—Environmental Aspects and Environmental Impacts
- Exhibit 5-2: Selected Techniques and Data Sources for Identifying and Evaluating Environmental Aspects and Impacts
- Exhibit 5-3: A List of Common Activities and Processes with Functional Areas at Shipbuilding and Ship Repair Facilities
- Exhibit 5-4: Significant Environmental Aspects as a Basis for Operational Controls and Objectives and Targets
- Exhibit 5-5: Procedure for Environmental Aspects, Objectives and Targets, and Programs (EP-003)
- Example 5-1: Flow Diagram and Aspects Form for Drydock Painting
- Example 5-2: Flow Diagram and Aspects Form for Small Parts Coating, Outdoors
- Example 5-3: Flow Diagram and Aspects Form for Dry Abrasive Blasting
- Example 5-4: Flow Diagram and Aspects Form for Burning and Cutting
- Example 5-5: Flow Diagram and Aspects Form for Ultra High Pressure Water Jetting
- Example 5-6: Flow Diagram and Aspects Form for Metal Grinding
- Example 5-7: Flow Diagram and Aspects Form for Material Transport, Crane
- Example 5-8: Flow Diagram and Aspects Form for Aluminum Fabrication
- Example 5-9: Flow Diagram and Aspects Form for Steel Fabrication
- Example 5-10: Flow Diagram and Aspects Form for Sheet Metal
- Example 5-11: Flow Diagram and Aspects Form for Ship's Fuel Removal
- Example 5-12: Flow Diagram and Aspects Form for Pipe Fabrication
- Example 5-13: Flow Diagram and Aspects Form for Compressed Air
- Example 5-14: Flow Diagram and Aspects Form for Inside Machine Shop
- Example 5-15: Flow Diagram and Aspects Form for Interior Ship Painting
- Example 5-16: Flow Diagram and Aspects Form for Paint Booth
- Example 5-17: Flow Diagram and Aspects Form for Steam Plant
- Example 5-18: Flow Diagram and Aspects Form for Supply Management
- Example 5-19: Flow Diagram and Aspects Form for Bilge Management Treatment & Discharge
- Example 5-20: Flow Diagram and Aspects Form for Wastewater Treatment & Discharge
- Example 5-21: Flow Diagram and Aspects Form for Waste Management

Module 6: Objectives and Targets

- Exhibit 6-1: Considerations for Developing Objectives and Targets
- Exhibit 6-2: Element Review Questions
- Example 6-1: Objectives and Targets Organized by Category
- Example 6-2: Identification of Objectives and Targets for Drydock Painting

Module 7: Environmental Management Programs

- Exhibit 7-1: Element Review Questions
- Exhibit 7-2: Environmental Management Program(s) Form (EF-003.02)
- Exhibit 7-3: Procedure for Environmental Review for New Purchases, Processes, and Products (EP-010)
- Example 7-1: EMP for Reduction of Fugitive VOC, HAP, and Particulate Emissions
- Example 7-2: Environmental Management Program for Process Optimization
- Example 7-3: Environmental Management Program for PCB Elimination
- Example 7-4: Environmental Management Program for Process Optimization—Energy and Water
- Example 7-5: Environmental Management Program for Process Optimization—Wastewater Discharge
- Example 7-6: Environmental Management Program for Solid Waste Reduction from the Unmasking Activity

Module 8: Training, Awareness, and Competence

- Exhibit 8-1: Two Areas of EMS Training
- Exhibit 8-2: Element Review Questions
- Exhibit 8-3: Procedure for Environmental Training and Awareness (EP-008)
- Example 8-1: Training Needs Analysis Matrix

Module 9: Communication

- Exhibit 9-1: Levels of Stakeholder Interest
- Exhibit 9-2: Element Review Questions
- Exhibit 9-3: Communications Program Matrix
- Exhibit 9-4: Procedure for Communication with Stakeholders (EP-004)
- Example 9-1: Case Study—Working with Stakeholders
- Example 9-2: Communications Program Matrix

Module 10: EMS Documentation

- Exhibit 10-1: Element Review Questions
- Exhibit 10-2: Worksheet for Development of EMS Documentation
- Exhibit 10-3: EMS Manual

Module 11: Document Control

- Exhibit 11-1: Element Review Questions
- Exhibit 11-2: Procedure for Document Control (EP-014)
- Exhibit 11-3: Master Document List for EMS Manual

Module 12: Operational Control

- Exhibit 12-1: Partial List of Typical Activity Areas and Operational Controls at Shipbuilding and Ship Repair Facilities
- Exhibit 12-2: Element Review Questions
- Exhibit 12-3: Procedure for Contractors and Sub-contractors (EP-016)
- Exhibit 12-4: Worksheet for Determining Which Operations or Activities Require Operational Controls
- Exhibit 12-5: Worksheet for Linking EMS Operational Control Procedures to Measurement Indicators, Responsible Parties, and Location of the Documents
- Exhibit 12-6: Worksheet for Training Plan for Operational Controls
- Example 12-1: Operational Control for Coating and Thinner Use (EWI-001)
- Example 12-2: Operational Control for Container Labeling (EWI-002)
- Example 12-3: Operational Control for Hazardous Waste Satellite Accumulation Areas (EWI-003)
- Example 12-4: Operational Control for Empty Chemical Container Handling (EWI-004)
- Example 12-5: Operational Control for Abrasive Blast Containment, Cleanup, and Storage (EWI-005)
- Example 12-6: Operational Control for Bilge and Contaminated Ballast Water (EWI-006)

Module 13: Emergency Preparedness and Response

- Exhibit 13-1: Element Review Questions
- Exhibit 13-2: Emergency Preparedness and Response Requirements Matrix
- Exhibit 13-3: Procedure for Emergency Preparedness and Response (EP-007)

Module 14: Monitoring and Measurement

- Exhibit 14-1: Element Review Questions
- Exhibit 14-2: EMS Program Measurement Criteria Worksheet
- Exhibit 14-3: Procedure for Monitoring and Measurement (EP-009)
- Exhibit 14-4: Compliance Tracking Log
- Exhibit 14-5: Pollution Prevention Tracking Log
- Exhibit 14-6: Calibration Log
- Exhibit 14-7: Environmental Measurement Indicators Log
- Example 14-1: Example of Links Between Aspects, Objectives and Targets, Operational Controls, and Monitoring and Measurement
- Example 14-2: Linking Operational Controls and Monitoring

Module 15: Nonconformance and Corrective and Preventive Action

- Exhibit 15-1: Root Cause Diagram
- Exhibit 15-2: Element Review Questions
- Exhibit 15-3: Procedure for Corrective and Preventive Action (EP-015)

Module 16: Records

- Exhibit 16-1: Element Review Questions
- Exhibit 16-2: Checklist for Records of Supporting Documentation
- Exhibit 16-3: Procedure for Environmental Records (EP-005)
- Example 16-1: Environmental Records Organizer
- Example 16-2: EMS Records Management Table

Module 17: EMS Audits

- Exhibit 17-1: Linkages Among EMS Audits, Corrective Action, and Management Reviews
- Exhibit 17-2: Element Review Questions
- Exhibit 17-3: Procedure for EMS and Regulatory Compliance Audits (EP-017)
- Example 17-1: General Facility Population Checklist for EMS Internal Audits
- Example 17-2: Top Management Checklist for EMS Internal Audits
- Example 17-3: Questionnaire for General Facility Population in Spanish

Module 18: Management Review

- Exhibit 18-1: Element Review Questions
- Exhibit 18-2: Procedure for Environmental Management System Management Review (EP-006)

Appendix B—Integration of Environmental Management Systems and Quality Management Systems

- Exhibit B-1: Relationship of EMS Elements to QMS (based on ISO 9001: 1994)

Appendix D—Environmental Aspect/Impact Ranking

- Exhibit D-1: Significance Determination for Aspects Based on Environmental and Business Considerations
- Exhibit D-2: Toxicity and Effects Worksheet
- Exhibit D-3: Worksheet for Exposure to Chemicals and Materials
- Exhibit D-4: Example of Risk Ranking Symbols
- Exhibit D-5: Information Required to be on an MSDS
- Exhibit D-6: Worksheet for Impact Ranking
- Exhibit D-7: Identification and Significance Determination of Environmental Aspects and Setting Objectives and Targets that Includes Impact Ranking
- Example D-1: Toxicity and Effects Worksheet—Non-abated VOC and HAP Emissions
- Example D-2: Worksheet for Exposure to Chemicals and Materials—Non-abated VOC and HAP Emissions
- Example D-3: Worksheet for Impact Ranking—Non-abated VOC and HAP Emissions
